

## Upload link:

When the user hits the upload link they will be presented with two options, to either upload a file from their local computer or to paste/drag a link into a text field.

If the user uses the URL box, all of the images found on that server are brought into the upload dialogue box along with a button allowing the user to import any image on the remote site into their MemeMaster account. If the user, on the other hand, uploads a file from the local drive, they will be able to simply post a picture up into their MemeMaster account.
