

selectedScreen.html

On this page we tried to design the app as close as possible to group 18's write up. You are directed to this page when you click on a gif or meme's thumbnail. This page allows the user to vote(stars), comment, share(orange circle), save(floppy disk), or download the meme. When a user hits save, a pop up screen will appear that allows them to navigate through their online directories. On the side bar we have suggested memes.

Future Developments: We plan on storing and displaying comments. Also we plan on implementing the save pop up menu.
